

Are You at Risk for Periodontal Disease?

Periodontal disease can be caused by bacteria that collect on teeth and in the space between the tooth and the gum. If left untreated, periodontal disease results in the destruction of the bone that supports the teeth. It is the major cause of tooth loss in adults.

The following questions may help you determine if you are at higher risk for periodontal disease: | points |

Do you have diabetes that requires you to take insulin?	If YES, circle	20
Do you smoke more than 10 cigarettes a day?	If YES, circle	20
Do you have diabetes but are not required to take insulin?	If YES, circle	10
If you have been treated for periodontal disease, do you return to the dentist as often as recommended?	If NO, circle	10
Have you lost a tooth in the last three years due to periodontal disease?	If YES, circle	9
Do you have your teeth cleaned at least once a year by a dentist or a dental hygienist?	If NO, circle	7
Do you brush your teeth at least once a day?	If NO, circle	4
Do you clean between your teeth with dental floss or an interproximal brush at least once a day?	If NO, circle	4
Do your gums bleed when you brush or floss your teeth?	If YES, circle	4
Are you over 50 years old?	If YES, circle	4
Do your gums hurt when you brush or floss your teeth?	If YES, circle	3
Have you noticed your gums receding (shrinking)?	If YES, circle	3
Do sensitive teeth keep you from brushing as often as you'd like?	If YES, circle	2

Now, total up your points:

You should see your dentist and discuss your self-assessment. If your score is 15 points or more you may be at higher risk for developing periodontal disease. An effective way to help prevent periodontal disease is to brush and floss daily, to stop smoking, and to have regular professional cleanings and periodic evaluations by your dentist.
